

Edinburgh Park - Barriers

Services 2 and 36 need to pass through lifting barriers at Edinburgh Park. These barriers use large vehicle detection sensors to raise.

Always use the nearside barrier. Never use the middle barrier as it is not wide enough for a bus to safely pass through.

On approach, you should stop and wait for the barrier to lift fully before proceeding. **Never follow another vehicle through the barrier - always wait until it lowers and then lifts fully again.**

If the barrier does not raise, or the barrier you're approaching looks to be stuck open, ensure the bus is secure then **leave your cab and use the contact button** to call Edinburgh Park security.

If ALL barriers are fully open, please proceed without contacting security as they will not lower again until the road is clear.
