

New AVL Consoles

Over the coming days, the new **Navineo AVL consoles** will be **switched on** and be visible on pilot buses **698 (Central)** and **94 (Longstone)**.

Please note that the consoles are currently **operating under test conditions**, collecting analytical data and should **NOT** be relied upon. The system will **NOT** be actively monitored by Control during this test phase.

To make a radio call, please **continue to use the F1 button on the radio** - the call buttons on the console will not work, and may not be displayed.

Block and trip data should be pulled through from the ETM, however please ensure that you **consult your timeboard for correct timings** and other information.

Further updates for the next stages of the console roll-out will be provided in due course.
